*"The support, exposure and opportunity you get is invaluable."*

As an apprentice you will be mentored in core business skills, such as problem-solving, innovation and how to communicate and collaborate with others to make a real difference in your role. You will be a part of the team and Nestlé from day one, and be encouraged to explore your interests as you learn new engineering techniques by doing them yourself under the guidance of our top professionals. What is exciting is seeing the positive impact your work is having.

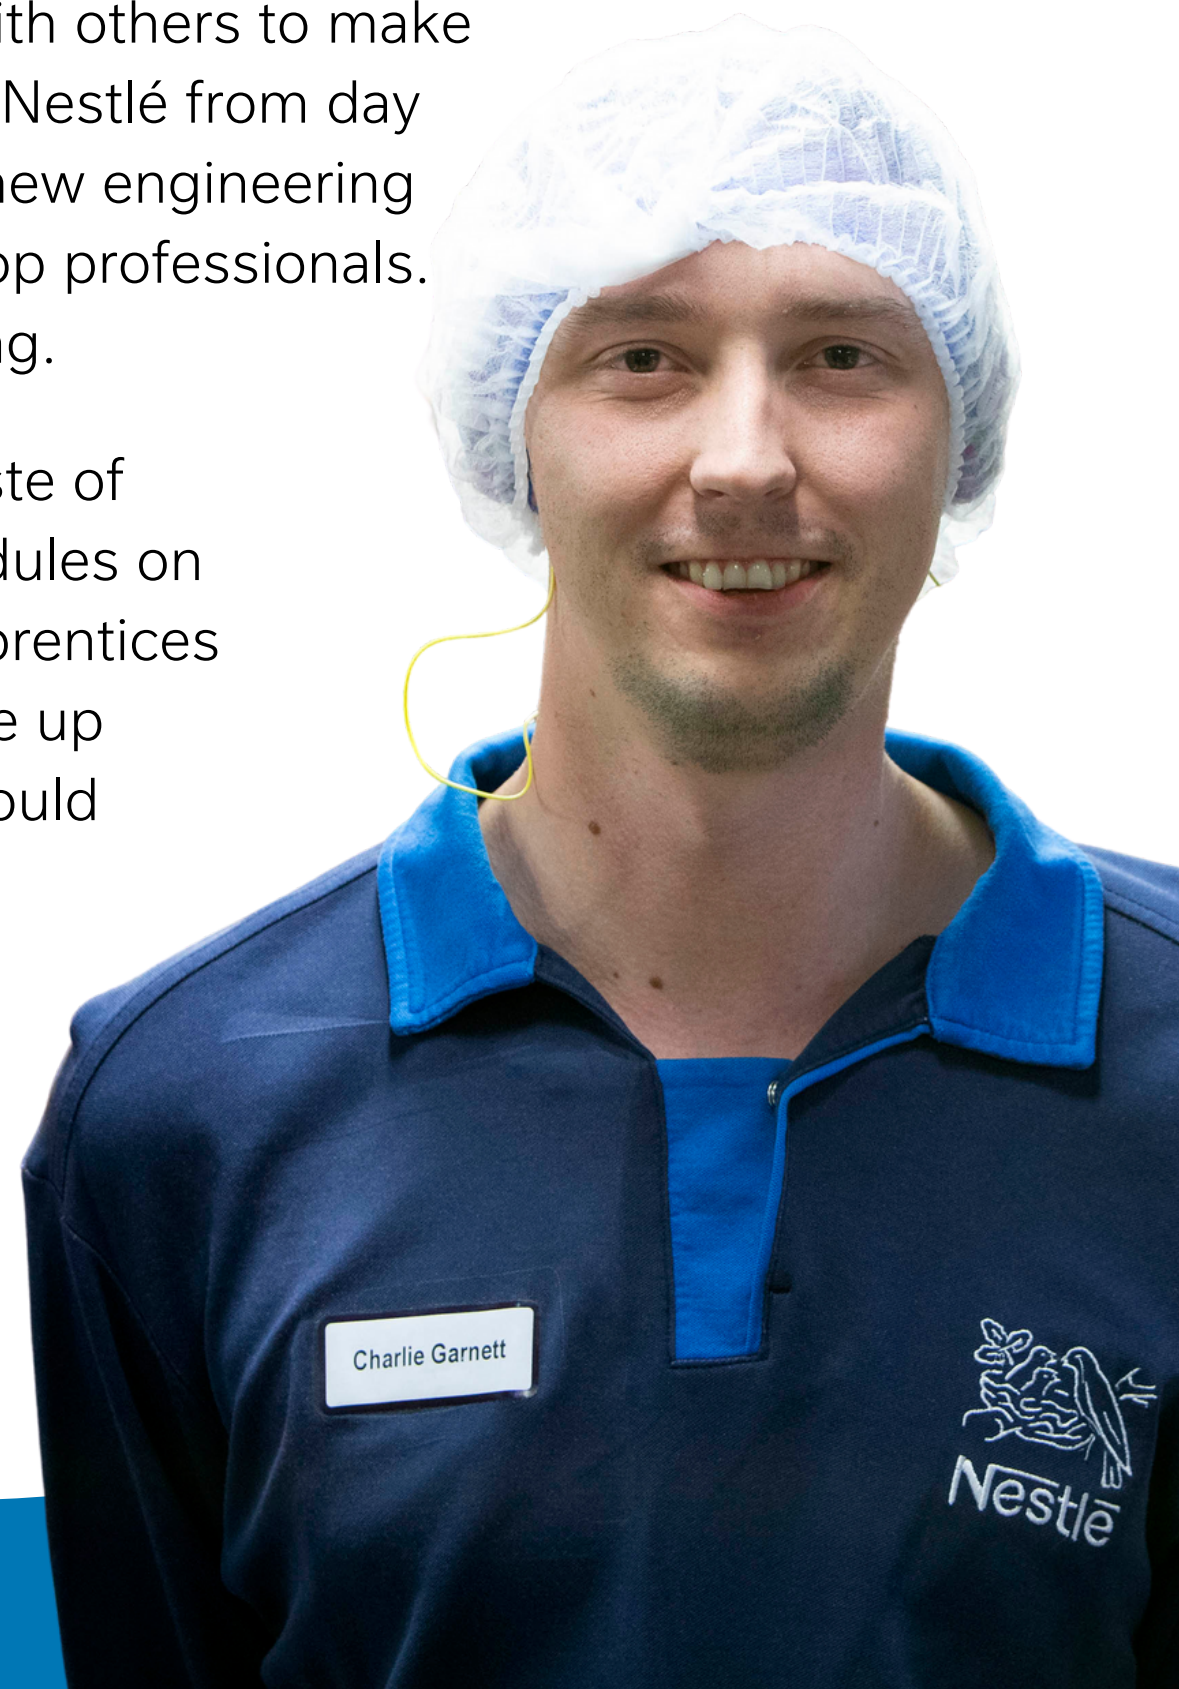

Taking time out from the factory floor, you'll get a taste of student life when you attend residential learning modules on block release in Liverpool. Here you'll meet other apprentices from around the country—it's a great chance to strike up professional relationships and build a network that could open doors in the future.

 Nestlé
